

# What Has The Biggest Effect On Your Salary?

Age	Gender	Education	Industry	Industry experience	Salary
-----	--------	-----------	----------	---------------------	--------

Given data on the above information, finding which data directly affects the salary column can help with understanding how to increase your salary. The following proves that the two columns with the greatest impact on your salary is your education and industry experience.

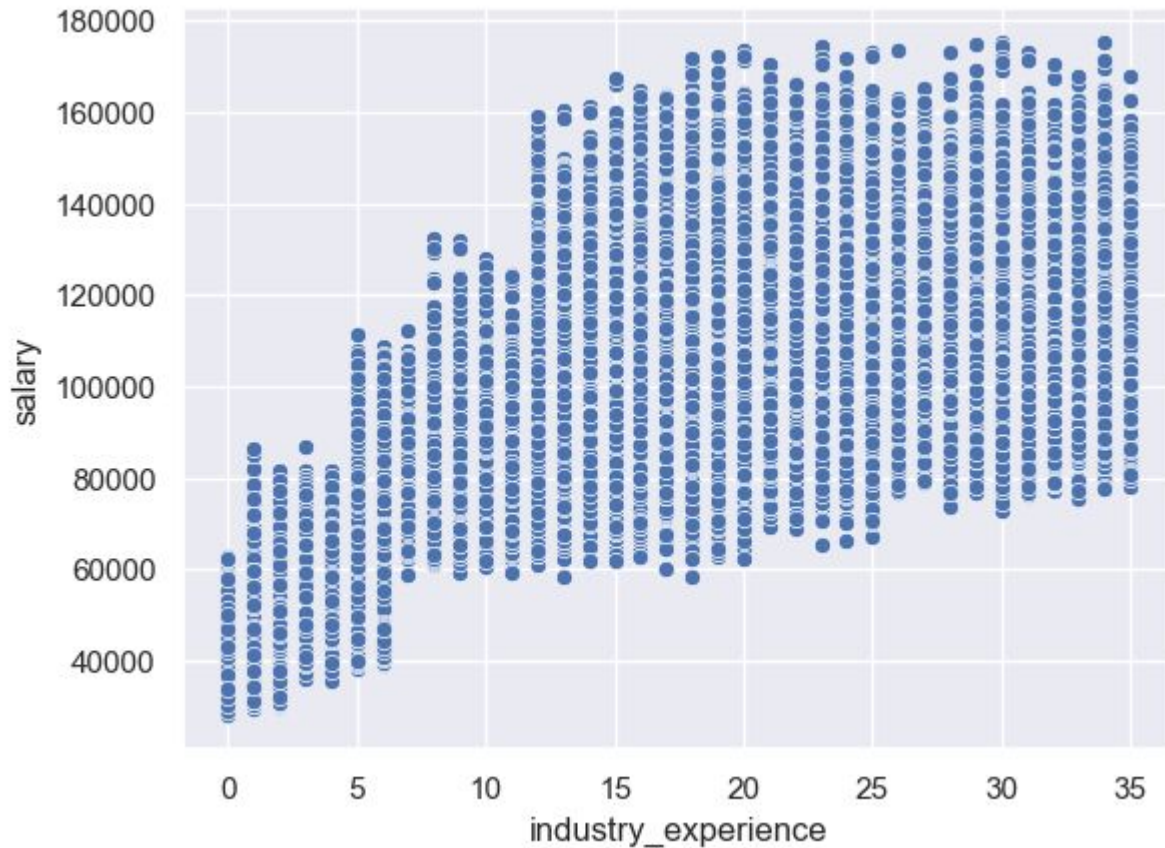

From this chart you observe that those who have a masters degree have a higher salary than those with a lower level of education.

With comparing salary to the amount of experience you have in your industry you can conclude that the greater level of work experience correlates with higher salary potential, as evidenced by the steady rise depicted on the graph.

Figuring out whether education or industry experience impacts your salary more is tricky. They both seem to have similar importance since their p-values are 0 and their Spearman correlation coefficients are low. But one thing's for sure, they both really matter when it comes to how much you earn.

EDUCATION

INDUSTRY EXPERIENCE
